

Imagination at Work

Imagination at Work is a school research competition in which students deal with actual sustainability issues. Together with scientist students experience how chemistry and life sciences can contribute to solutions for sustainability issues now and in the future.

May/ June

Course for experts in which they learn more about the competition, the research project and about didactical skills in order to guide the students properly.

September

Kick-Off: official start competition for students

Meet&Greet: first encounter students and expert

November

Practical at lab expert

Course sustainability issues for students

February

Students turn in report

Jury and experts rate the reports

April

Finals for students. The finalists present their project to the audience. Other contestants present their project with a poster.
